[Matthias W. Rosch, D. G. Haydu, Thomas Padron-McCarty, Tore Risch. Databasteknikskrift 1996]]. Abstract: On the basis of the scheme of classes in the area of information systems, the concept of the information data base is analysed and discussed.

The study aims at the development of a model and basic normative assumptions for the technical support of the services of a data bank from the point of view of information technology. As a starting point, the current situation in the data base management systems market is discussed, and the possibility of building a universal data base with certain basic building blocks is considered. Special attention is paid to the concept of the data base user in order to achieve an effective support of the basic building blocks of the data base. On this basis, a practical model for a data base management system is proposed which comprises four distinct layers. Although all these layers are based on existing concepts and are not new, this model is intended to cover the complexity which is typical for data base technology. In this way, a procedure is proposed for the development of data base systems. The model, its advantages and disadvantages are discussed, and the authors present some applications. The model will be tested on the basis of real data base management systems and the results will be used to elaborate the contents of the future versions.

Q: Blur on Scroll and Keep image in center I am trying to create a page like on the attached image In this page i have to blur the image when page is scrolled down and keep it in center like in attached image. A: The code is similar to this :

```
Javascript var delay = 0; $(window).on('scroll', function() { var scrollTop = $(window).scrollTop(); if (scrollTop >= 100) { $(".blog-img").css('filter', 'blur(5px)'); delay = 300; } else if (scrollTop > 100) { $(".blog-img").css('filter', 'blur(0px)'); $(".blog-img").
```
